# The three friends

(Mária Povalová)

In one castle there lived Janet. Near her, 2 metres from her house there lived Theresa in a castle which was 20 metres high and 25 times wider than high. How wide was the castle? In a small village near the Janet´s castle lived Susie. When they were out, they were playing Hide and seek. First, Theresa was counting up to 50. Then the Janet was counting up to 60. The last was counting Susie, she was counting about 10 more. When they finished the game they wanted to know, what number were they counting up to. But they didn´t know how to count. Can you help them?
