

Three mice

(Martina Havrilová)

Many years ago, in place called Brezovica, there lived three mice: Juka, Luka and Kuka. One day, they lost in the local forest and they found a giant tree. "Who is there?" a black animal inside the tree asked. "We want to go home" mice replied. "So you must do three tasks" the black animal told them. "The first is: What is circumference of a garden, when its shape is square 18×18 ? The second is: how many of my friends can come there to my party, if I'm friend with 36% of all animal population from this forest in which live 150 animals. And finally, the third task is: How long has to be my furnace to get there 3 mice which are 120 cm long?" The last question was too difficult for them, but when Luka finally said the result, black animal jumped on them. Mice run as fast as they could and when they arrived to their town Micerovo, they reproduced the story to their friends. The deal was: We will never go to that forest.
