

Three pigs

(Kristína Hrobárová)

Once there were three pigs. They had fifteen brothers, whose left. How many pigs were there? Three pigs had to build houses for living because they were afraid of wolf. The first pig built his house from straw. This pig needed 148 kg of straw. It already had 89 kg of straw. How much did it still need? This house wolf blew down.

The second pig built his house from wood, but wolf blew it down too. The third pig built his house from bricks. This house weighed 10680 kg and house from straw weighed 0,148 t. How much is this house heavier than house from straw? This house wolf didn't blow down and all pigs moved into this house. They had 36 friends, that is 40% of inhabitants in a village. How many inhabitants are there in a village? Wolf tried to catch pigs for 39 years, what is 60 % from his life. How many years did the wolf live? But he didn't catch them.
