# 3 pigs

(Mária Povalová)

In a forest there lived 3 pigs. They were called Kviko, David and Kanva. They lived far away behind the seven mountains and the seven valleys. Kviko was 2 years older than Kanva. Kanva was 15 years less than David. He was 35 years old. Have many years were they together? One day Kanva decided to build a house made of 12 kg of straw, 2kg of wood and 10 kg of mortar. How much money will he need when 1kg straw cost 15€, wood cost 10 € and Mostar cost 50€. David paid for his house 1000 €, Kviko paid 2-times more than Kanva. Sort the costs of houses in ascending order. One day the wolf come to their houses. At first he blew with the smallest power. Than he came the David´s house and he blew more. Finally when he came the Kvik´s house he couldn´t blew out his house even he used the biggest power. So the wolf was angry and enraged.
