

# Three pigs

(Dalibor Djubašák)

Once there were three little pigs. The first pig was green, the second pig was yellow and the third pig was red. They wanted to build a house. Green pig wanted a house from straw. It needed 450 kg of straw on a house and on the hall about 120 kg of straw less . How many kilograms of straw did he need together? One day a wolf came and he blew out the house. The yellow pig wanted a wooden house. He used 70 branches for a house and for a roof about twenty more. How much wood did he use together? Again the wolf came and he blew out the house. Third pig wanted a house of the bricks. He used 620 bricks for a house and on the roof five times of wood less. Green and yellow pigs come to hide to the red pig's house. Wolf come here too and he tried to blow the house. But nothing happened. Then wolf fell asleep and pigs threw very heavy stone (about 80 kg) on it. Did it push him into the ground if wolf was 50 kg?
