

# 3 pigs

(Dominika Litviaková)

Far far away in the forest there lived 3 little pigs. The first pig had 45kg, the second had 55kg and the third had 75kg. Each put on weight 7kg every year. Now they are 5 years. "How many kg have you now together?" told Muška to Svetluška. "You can count this." they said. 3 pigs had

a lot of rivals. The biggest was the wolf Ostroluk. He was still hungry. He has eaten about 284kg of food during a week. He ate only 4kg today. How many % of food does he need? Pigs built the houses because they want to save life. The first pig built a stew house, second pig built a sand house and the third pig built his house from bricks. When the pigs were sitting on the sofa, the wolf came. He was very hungry. The Wolf blew off the first because it was only 5kg heavy. First pig ran into his brother. The second pig's house was 6kg heavy, so wolf blew off it too. Pigs ran into the third brother. They hid there. They had the last chance here. His house was very heavy. It weights as much as their two houses together. The Wolf Ostroluk was not so strong so he must go to sleep hungry. The pigs said thanks to him. They lived happy until they died.
