Red Hood

In a small village, in which, there were only 15 houses - 6 were green, 4 were blue and the rest were yellow, lived Red Hood with her mother. How many yellow houses were there in a village? One day, Red Hood's mother prepared 7 pies and twice as much stuffed cakes. How many pieces did she have, together? She put them into the basket and told the Red Hood to go visit her grandmother. Red Hood walked 280m and arrived to the bridge. How many metres does she have to walk, if her grandma lives 0,5km away from the village? On the forest glade, she decided to pick some flowers for her grandma. She picked 18 wild poppy flowers and 21 succory flowers. How many moonflowers does she have to pick, if she wants to have 63 flowers? Red Hood felt hungry, so she took 2 stuffed cakes and 1 pie from the basket. How many pies and cakes were left in the basket? Then, she went further. When grandma saw her grandchild, she was very happy. She divided cakes and pies, so both had equal number and they feasted together. How many cakes and pies did every one of them have? They said bye to each other in the afternoon and Red Hood went home.
