Brave Frederik

(Dalibor Djubašák)

There once was a princess with name Michaela. She was wanted by three princes, prince Eduard, prince Eric and prince Frederik. Princess' father gave them 3 tasks. Prince, who solves the task, gets the princess. First task was to kill 10-headed dragon and bring as many of his teeth as possible. Dragon's cave was 40km far from kingdom. Eduard came there after 3 hours, Eric's journey took 3 hours more and Frederik's three-times less. How many hours did Eric's and Frederik's journeys take? When they arrived, there were three 10-headed dragons. Eduard cut off 5 heads. Erik 2 heads less and Frederik three times more than Erik. How many heads did they cut off the dragons? How many dragon teeth did they bring to king, if every dragon had 55 teeth per head? Then everyone had to climb on 60m high tree, as high as possible. Two who will climb the highest, will get the third task. Eduard climbed 40m, Erik 5-times less and Frederik 7-times more than Erik. How many metres did they climb together? Third task was: Bring the princess as much of 750 flowers as possible in one hour. Eduard brought 36% of all the flowers and Frederik 18% more. How many flowers did they bring together? Frederik won and was made a king. They lived happily ever after with princess.
