John and Mary

(Daniel Grman)

John and Mary lived in a house, near the forest. One day, they got lost, when they were looking for something to eat. Suddenly, the noticed house, on which, there were 1000000 gingerbreads. How many gingerbreads was left on the house, if John and Mary ate 201 gingerbreads? One day, the witch Jaga caught them. She told them, that she will eat them, if they won't bring her new sweet gingerbreads. John told her: "If you can help us find our house, we will pay you the whole 20 euros and 50 cents back." Witch agreed and took them home. In the house, the time stopped. It could be brought back, but only if they correctly compute 14x15x25:21. The witch helped them solve this. John and Mary hugged their parents and paid the witch back her money.
