

7 goats

(Lucia Hucíková)

In a small house there lived seven small goats. Their mum had to go to the meadow look for some food. Her name was Zuzka. Zuzka had to walk through the village, which is 1,2km long. How many minutes did the journey take when she went 60 cm in a minute? Later when the seven goats went for a walk they saw that three pigs had a nicer house. They decided to build a new house. It will be bigger than 10,4m.

The goats decided that they will build:

On Monday- they will build 300cm.

On Tuesday- they will build 1280mm.

On Wednesday- they will build 2,2m.

On Thursday- they will build 4100mm.

On Friday- they will build 0,02m.

How high will be their new house? Will

it have more than 10,4m? They were satisfied and they had a nicer house than pigs.
