

Mr. from New York

(Michal Kanik)

Once there was a rich Mr. who wanted to go to New York. When he came to the airport, he saw 3 planes. He wanted to get to New York as quick as possible. The first plane flew speed 400km/h, second plane flew speed 600km/h and the third plane flew speed 380km/h. Which plane is the fastest? Count the speed in m/s. Mr. boarded and flew. When he arrived to the city, he saw splendor and beauty. Buildings, the river and a lot of people. Mr. visited different business centre and restaurants. Once he came to the shop with clothes and he choose beautiful coat. He did not know how much does it cost. Original price was 300 dollars, but today it costs of 20% less. How much does it cost today? Mr. bought it and he went to the most expensive restaurant in the city. The food was amazing, fragrant and tasty. He ordered the most expensive food, which was there. It cost 125 dollars. Next he ordered something to drink, it cost 24% less and an ice-cream too, which cost 14% more than drink. How much dollars did he pay? During the next few days he did the same things. But he no longer spent his money, so it was time to go home. He will remember this trip forever.
