Mata´s Party

(Martina Havrilová)

Today was Martinka's birthday. She had to prepare a room where guests would be. And she started right away. She was cleaning a room, that was 4 times 4 metres. She also had unclean balcony, that was 2 times 2 metres. How big area did she have to clean up? So, the room is clean. It was needed to bake cakes. She planned to bake 48 cakes, but she is not a good cook. So she didn't make three of them, jam went out of 8 of them, she ate 2 and grandma brought her 25 cakes. How many cakes did she have? Then, her mom brought her 4l of cola. Martinka is clumsy, so she spilled 1.5l. How much did she have for drinking, if she added 0.5l of juice? Everything is ready, guests are coming. Martinka had 2 friends, that invited 5 of their friends each. But 3 couldn't come, one didn't like her and so she also didn't come. There also came 15 friends from next door. How many of Martinka's friends came to the party? Martinka had 3 aunts, that wanted to come and gratulate her, together with their families. Every one of them had 2 kids, but aunt Margita, which had 3 kids. Husbands of two aunts didn't come. How many relatives did come there? Party was great. Everybody was satisfied.
