

# *How grandma and grandpa pulled a beet*

Once upon a time, there lived grandma and grandpa. They lived on the border of forest, together with their grandchildren, Misko and Anicka and with their animals. Grandpa was taking care of house and everything around it, and grandma was taking care about household. One nice morning, grandpa woke up and went outside. It was really good there. He looked at the old, dirty barrel. He knew right away, what to do, he took paint and boxes and started painting. How many kg of paint will he need, if barrel is 2m high and his diameter is half the height? He needs 20g of paint for 1 dm<sup>2</sup>. Grandma was very happy, when she saw a pretty, painted barrel. Grandma and grandchildren were taking care of all beets and strawberries in the garden. Few days later, all of them were very surprised. A giant beet had grown up in their garden. The beet weighed 45kg. Grandpa and grandma thought about money they would get, if they sold the beet on the market. How many coins will they get for the beet, if 7kg cost 2,8 coins? They sold the beet to first buyer, Durko. Grandma and grandpa bought only good things, something for everyone. They bought lollipops for grandchildren, milk for a cat, bones for a dog and cheese for a mouse. It costed them 5 coins. They put away 3 coins and bought shoes for 4. How many coins did they have left, if they earned 18 coins? After that brilliant day, they all went to sleep. They couldn't forget this luck, not even after many years. And always, when they remembered, they laughed at it. And they lived happily ever after.
