

Shrek and Maths

(Michal Jakubek)

Once upon a time in a beautiful kingdom there lived Fiona with Shrek. Shrek wanted to be a king, so he had to study. He was wise, but he didn't like to go to school. One day they were learning at school about percents and diagrams. He didn't pay attention as usually. His homework was to find out how much food does he eat every day. So he started to count. But he didn't know the answer. Fiona advised him to go ask Pinocchio. Pinocchio said: You have to divided the day by the food. He did how the Pinocchio said.

He ate 20 times during the day. $1 \text{ day} : 20 = 4,166667$

What do you think is it correct?
