Mr. Cokamarakarasafacent

(Dávid Pakos)

There once was one mister called Cokamarakarasafacent. He was a repairman. When he was little, he lived in a poor family. He was on the street and cleaned toilets. He has always cleaned 146 toilets per day. How many toilets has he clean in 3 years if one year is 365 days long? He had accounts in bank with much money, with annual rate of interest of 13%. He had 321000 euro saved in bank. What was his interest per year? Cokamarakarasafacent went to restaurant for pizza. He put there 14% of mushrooms, 67% of dough, 9% of ham, 5% of bacon and 5% of flour. The pizza weighed 930g. Calculate, how many g did dough weigh. He was full so he went home, to sleep. He has slept for 14 hours. He spent for 26% of time on his belly, 34% on left side and 40% on his right side. How many hours did he sleep on his right side? And that's all for now.
