Fairy and a Boy

Once upon a time, there was a boy. One day, he went to the forest. But the road there was very long. The boy entered the forest and after a while, he noticed a forest fairy behind the tree. The Fairy followed him, until he stopped. She didn't want to let him leave the forest, until he finishes three tasks. She persuaded him and gave him the first task: "Count all the animals in the forest. There are 12 animals near the river, 4 on the tree and 8 under the ground."

Fairy started with the second task: "Calculate the whole length of the border of my forest, that is in square shape, with one side 440m long." She didn't want to waste time, so she also told him the last task: "How much time will it take you, to walk from your house, to the border of my forest, if your speed is 5kmph? The forest is 2500m away from your house." The boy answered all the questions and the Fairy let him out of the forest.
