

## *I will save you*

Once there was the universe, in the universe was the Earth, on the Earth was the continent and on this continent was a kingdom. There a beautiful princess Lea with his parents lived there. Her best friend was a boy from a neighbouring house. And although he was very poor, princess Lea liked him very much. The worst was a aristocrat from the neighbouring kingdom. He was very bad and wanted the princess just for her money. But nobody knew about it. One beautiful sunny day robbers attacked the palace. And when the king refused to give them the gold from the royal treasury, they kidnapped the princess and they run away. Next two days nobody knew where princess Lea is. Where is she? Where thieves kidnapped her? Felix, poor boy from a neighbouring house, decided to look for the princess. As he traveled around the world, he found the cave from which he heard screaming and crying. He ran into the cave and found a message "Solve out three tasks, and save the princess!" The first task was: Calculate the surface of the block with dimensions of 2 m, 1,5 m and 1 m. The second task was this: Calculate  $\frac{1}{3}$  of 10002, what it is  $\frac{1}{3}$  of population the whole kingdom. A third task was this: How many liters of air is in this room, that is designed as cube with side 3m. Felix done it very well. All three tasks solved out quickly and correctly. Rescued the princess and they came back home. But on their journey home unpleasant surprise waited them - they met bad aristocrat and his army. Felix was captured and aristocrat took the princess. When they came to the king, the aristocrat said, "I saved the princess myself. You should agree with our marriage". And the king agreed. Aristocrat forbade the princess to tell the truth, because otherwise he will kill Felix. One day the princess said all to her maid. Gossipy maid didn't wait and quickly ran to the king. Angry king banished aristocrat from the kingdom and rescued Felix. Princess Lea and Felix got married and lived happily ever.... Probably a long time, because they both very good at Maths.
