

Animals

(Adriána Števaňáková)

Once there was one animal which liked to eat the carrots. It was a rabbit. It ate 30 carrots during one day and after each one it gained 5 grams. When he was born he weighed 0,5 kilograms. How much will it weigh in 30 days? How many carrots did he eat during the 7 days? Soon the dog came. He had no home and did not like to eat carrots. So rabbit had to find some bones. When

the rabbit looked for food he thought of Sergeant Papua. He always knew to advise. He visited him and asked him whether he had some bones. Sergeant Papua did not hesitate and he gave him some bones. He had 12 bones but he lost 3 of them. The rabbit found a half of bone. How many bones will the dog have? The dog stayed with a rabbit and they were very good friends. How many numbers were in this story? Count and write!
